

Reviews about the Boberg XR Series

"The XR9 is the most accurate micro gun I have ever fired, bar none, and also has the lightest recoil. ... I am extremely impressed with this gun and it's operating system. The Boberg XR9 and it's siblings are truly remarkable and they need to be felt and shot to be appreciated."

—Scott W. Wagner *Concealed Carry Magazine*

"...the Boberg lives up to the promise of successfully changing the way semi-autos operate." —Dennis Adler *Concealed Carry Handguns Magazine*

"At the Boberg plant in Minnesota...each pistol is lovingly and individually made, and it shows." —J. B. Wood *American Handgunner Magazine*

Why carry an XR45-S?

- Powerful
- Concealable
- Little Recoil
- Accurate
- Light
- Made in USA
with Minnesota quality

Small enough to fit easily into a purse!

The Boberg XR Series patented cartridge feed mechanism

How it works:

Unique to the XR Series, cartridges are loaded bullet-forward into the back of the magazine. The full magazine is then inserted into the gun, putting the top cartridge in the grasp of a pair of tongs. To chamber a round, the slide is drawn rearward with the tongs pulling the cartridge over a mechanism that lifts the cartridge from the level of the magazine to the level of the barrel, where control of the cartridge is transferred from the tongs to the chamber extractor. When the slide travels forward, the live round goes straight in to the chamber—no feed ramp is needed! Straight-in motion allows for lower chamber clearance, which results in less leakage and adds to the extra velocity that the longer barrel already delivers to the bullet.

Power, Prestige, Performance

When More Power Counts

People who choose to carry for self-defense want a handgun they can depend on when their life is on the line, but at the same time, they really need the power to stop their attacker. The XR45-S (Short) provides superior ballistics and handling in comparison to any other firearm its size. Its locking lug, rotating barrel significantly increases accuracy while greatly decreasing felt-recoil, while its ergonomic frame design also adds to these qualities. With its performance equal to much larger handguns, it's no wonder more people are choosing the XR45-S over its competitors.

The Boberg Solution

Years of exhaustive development and testing has resulted in the unprecedented Boberg XR Series pistols. The XR45 is the world's most powerful .45 sub-compact pistol. This new technology utilizes a locked breech, rotating barrel system. Featuring the unique XR™ Feeding Technology, this gun offers the longest barrel for its size, meaning that no matter what ammunition it fires¹, it will always deliver significantly more power than any other similarly-sized gun on the market.

The XR™ Feeding Technology is the only pistol that maintains positive control of the cartridge from magazine to chamber, which translates to superior reliability. The rotating-barrel configuration results in significantly reduced felt recoil which previously had not been experienced in a gun this small.

How powerful is the XR45-S? It can deliver up to 650 ft-lbs (880J) of fight-stopping power. Compare that to a 9MM at 300 ft-lbs² (407J).

1) Not rated for aluminum-cased ammunition
2) Maximum energy of a popular non-plus-P rated pistol

Unique positive locking extractor stays shut during percussion and guarantees case extraction
Rotating barrel system for reduced recoil and increased power and accuracy
High-strength Stainless Steel long barrel

Back strap arch protects shooters hand from slide and increases control

Smooth DAO trigger pull

Extended front strap for deep grip

Low-profile easy-to-change forward sight

Takedown Lever Active Slide Stop is quick and easy to use

Low profile, windage adjustable 3-Dot Sight

Snag-free hammer

Magazine release

Magazine tang adds control and keeps the ring finger on the grip (smaller hands will get a full-fingered grip)

BOBERG XR45-S (SHORT)

CALIBER .45 ACP, .45 ACP +P
LENGTH 5.77" (147MM)
HEIGHT 4.4" (112MM)
WIDTH 1.08" (27.4MM) SLIDE, 1.02" (26MM) FRAME
WEIGHT : 22 OZ (624G)
BARREL LENGTH 3.75" (95.25MM)
ACTION ROTATING BARREL LOCKED BREECH
SIGHTS DIRECT WINDAGE, LOW-PROFILE, 5.31" (135MM) RADIUS
TRIGGER PULL 8# (46N)
SAFETIES 2
CAPACITY 6+1
MAX ENERGY 650 FT-LBS (880J)

XR45-S Platinum

XR45-S Onyx

XR45-S Standard
