

9mm Muzzle Energy, Ft-lbs Federal Hydra-Shok™ 147-gr JHP

How does the power of the XR9-L (Long) compare to other guns?

In the chart above, we can see that the ballistics of the XR9-L exceeds even the ballistics of a full-sized pistol (with Hydra-Shok™ ammo). Note the radical difference in power when compared to similar-sized pistols lower on the chart.

Why carry an XR9-L?

- Reliable
- Light
- Concealable
- Little Recoil
- Accurate
- Sleek design
- Affordable
- Made in USA with Minnesota quality.

Small enough to fit easily into a purse!

The Boberg XR9 Series patented cartridge feed mechanism

How it works:

Unique to the XR9 Series, cartridges are loaded bullet-forward into the back of the magazine. The full magazine is then inserted into the gun, putting the top cartridge in the grasp of a pair of tongs. To chamber a round, the slide is drawn rearward with the tongs pulling the cartridge over a mechanism that lifts the cartridge from the level of the magazine to the level of the barrel, where control of the cartridge is transferred from the tongs to the chamber extractor. When the slide travels forward, the live round goes straight in to the chamber—no feed ramp is needed! Straight-in motion allows for lower chamber clearance, which results in less leakage and adds to the extra velocity that the longer barrel already delivers to the bullet.

When More Power Counts

People who choose to carry for self-defense want a handgun they can depend on when their life is on the line, but at the same time, they really need the power to stop their attacker. The XR9-L (Long) provides superior ballistics and handling in comparison to any other firearm its size. Its locking lug, rotating barrel significantly increases accuracy while greatly decreasing felt-recoil, while its ergonomic frame design also adds to these qualities. With its performance equal to much larger handguns, it's no wonder more people are choosing the XR9-L over its competitors.

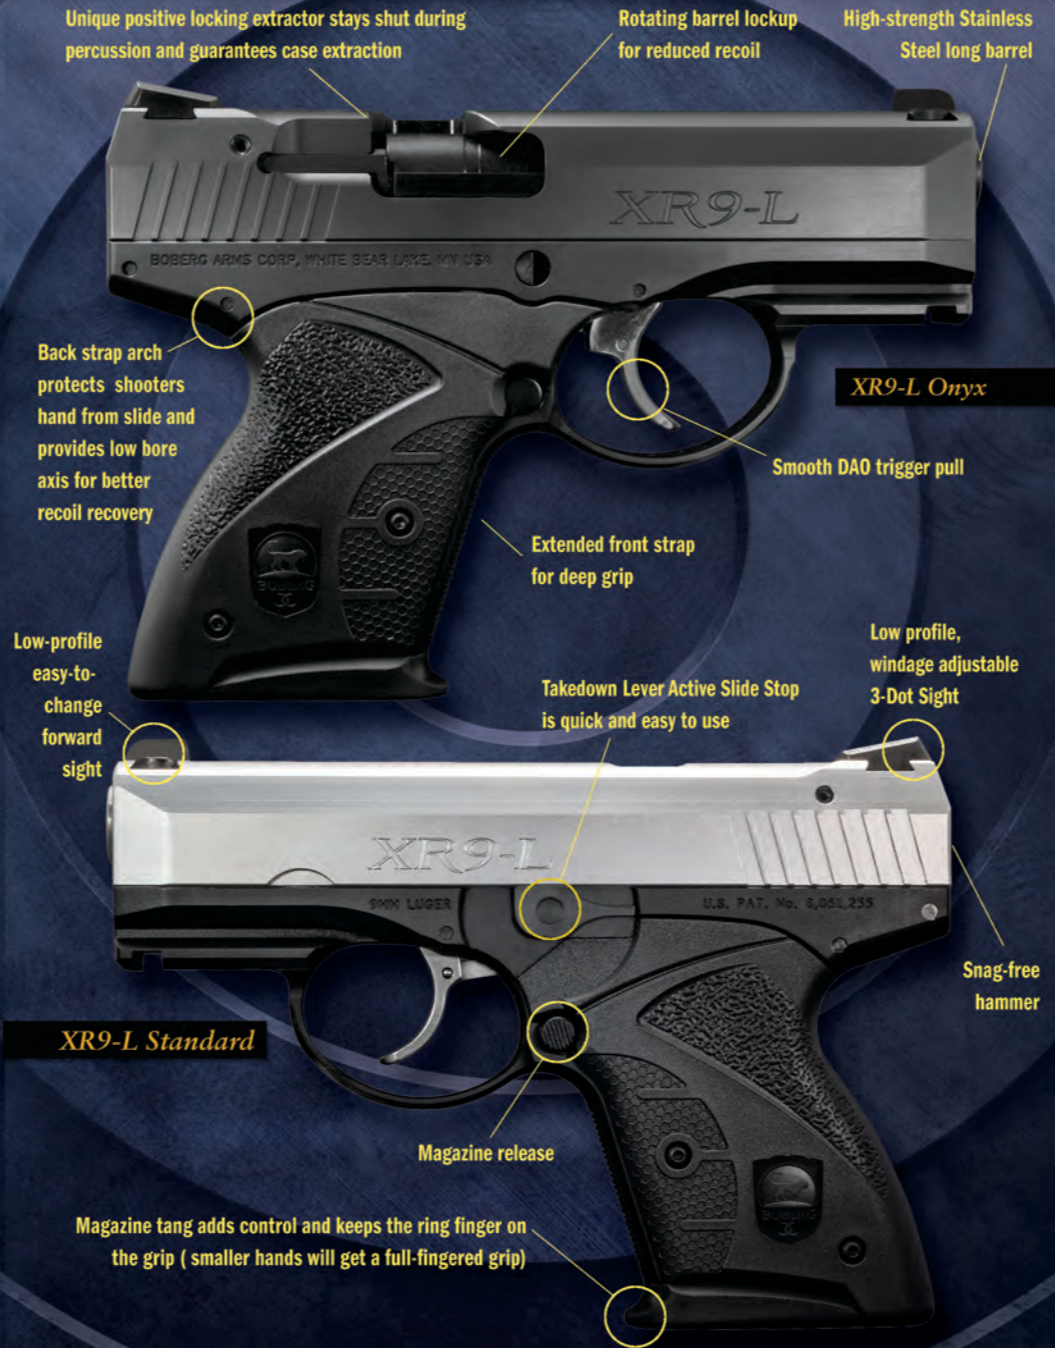

The Boberg Solution

Years of exhaustive development and testing has resulted in the unprecedented Boberg XR9 Series pistols. The XR9-L is the world's most powerful 9MM sub-compact pistol. This new technology utilizes a locked breech, rotating barrel system. Featuring the unique XR™ Feeding Technology, this gun offers the longest barrel for its size, meaning that no matter what ammunition it fires¹, it will always deliver significantly more power than any other similarly-sized gun on the market.

The XR™ Feeding Technology is the only pistol that maintains positive control of the cartridge from magazine to chamber, which translates to superior reliability. The rotating-barrel configuration results in significantly reduced felt recoil which previously had not been experienced in a gun this small.

How powerful is the XR9-L? It can deliver up to 500 ft-lbs (678J) of fight-stopping power². Compare that to a .32 at 150 ft-lbs (203J) or a .380 at 210 ft-lbs (285J)...or even a same-size 9MM at 300 ft-lbs³ (407J).

1) Not rated for aluminum-cased ammunition
2) Using Cor-Bon PowRball 100-gr +P JHP ammunition.
3) Maximum energy of a popular non-plus-P rated pistol

Unique positive locking extractor stays shut during percussion and guarantees case extraction

Rotating barrel lockup for reduced recoil

High-strength Stainless Steel long barrel

Back strap arch protects shooters hand from slide and provides low bore axis for better recoil recovery

XR9-L Onyx

Smooth DAO trigger pull

Extended front strap for deep grip

Low-profile easy-to-change forward sight

Takedown Lever Active Slide Stop is quick and easy to use

Low profile, windage adjustable 3-Dot Sight

XR9-L Standard

Snag-free hammer

XR9-L Platinum

Magazine release

Magazine tang adds control and keeps the ring finger on the grip (smaller hands will get a full-fingered grip)

BOBERG XR9-L (LONG)

CALIBER 9MM OR LUGER
LENGTH 5.95" (151MM)
HEIGHT 4.2" (107MM)
WIDTH .96" (24MM)
WEIGHT 18.4 OZ (522G)
BARREL LENGTH 4.2" (107MM)
ACTION ROTATING BARREL LOCKED BREECH
SIGHTS DIRECT WINDAGE, LOW-PROFILE, 4.6" (116.8MM) RADIUS
TRIGGER PULL 7.5# (33N) (Standard)
6.0# (27N) and 9.0# (40N) (Optional)
SAFETIES 2
CAPACITY 7+1
MAX ENERGY 500 Ft-lbs (678J)
(Using Cor-Bon PowRball 100-gr +P JHP ammunition)

Full Size power when your life depends on it.

Variety of accessories available.
